

Deliver on the promise of agents.

You've invested in building the agents and the platform. Your rollout still runs on classrooms and training sessions, and the return depends on every team using them every day. Cartesian gets them there with context-based distribution: the right agent for each task, surfaced inside the tools your people already use.

COMING SOON TO

Claude · ChatGPT · Microsoft Copilot

Building agents is no longer the hard part.
Getting them to the people who need them is.

The agents are built and approved, but the rollout still runs on classrooms and training sessions. Most people never find them, and teams build the same agent twice.

Your approved agents		41
monthly-performance-report	Finance Ops	1 OF 7 TEAMS
contract-check	Legal	1 OF 7 TEAMS
pipeline-summary	Sales	2 OF 7 TEAMS
report-builder	Sales	1 OF 7 TEAMS
report-builder	Finance Ops	1 OF 7 TEAMS

The right agents, surfaced and used in every team.

- 1 Cartesian is the context-based agent distribution layer that turns the agents one team builds into capability every team uses.
- 2 Cartesian understands the task each person is working on and surfaces the right approved agent inside Claude, ChatGPT or Copilot, the moment they need it.
- 3 From there, Cartesian makes sure every agent is shared across teams, runs the way it's designed, and proves what it delivers.

THE TASK

SARAH · OPERATIONS

“I need the September performance report for Operations by Thursday.”

SURFACED IN

Claude

ChatGPT

Copilot

● monthly-performance-report

V3.1 · APPROVED · FINANCE OPS

SHARED ACROSS TEAMS

7 of 7 teams

RUNS THE WAY IT'S DESIGNED

3 agents, in order

OUTCOME MEASURED

Solved · logged to Operations

See it work **in one request.**

- 1 Sarah asks Claude for the September performance report, in the same format as August.
- 2 Cartesian reads the task and her role, and surfaces monthly-performance-report from your catalogue.
- 3 She says yes. Three agents run in order inside your account, with nothing to install.
- 4 The run is logged to Operations, so you can see what it solved and what it cost.

Supplier due diligence: Halden Data

Share

We're bringing on Halden Data as a subprocessor for the platform. Can you run due diligence on them before next Friday's procurement meeting?

Surfaced from your catalogue

Vendor due dilligence

USED BEFORE

v2.3 • Approved • Security and Risk

Bundle of 3 agents, run in order

Used by 4 teams
Last run Tuesday

Vendor security review

v1.1 • Approved • Security

Used by 1 team

Showing 2 of 3 matches

Our process is to send the questionnaire, open the ticket, and assess the answers. That is three agents, run in order. Want me to run them?

✓ Nothing to install.

It runs here, inside your account

Yes, run all three

Vendor due diligence

✓ Sent the security questionnaire via Panorays

QUESTIONNAIRE AGENT

✓ Opened procurement ticket PRC-4127

PROCUREMENT AGENT

⌚ Waiting for Halden's answers, due 7 Oct

QUESTIONNAIRE AGENT

• Run the vendor assessment on their answers

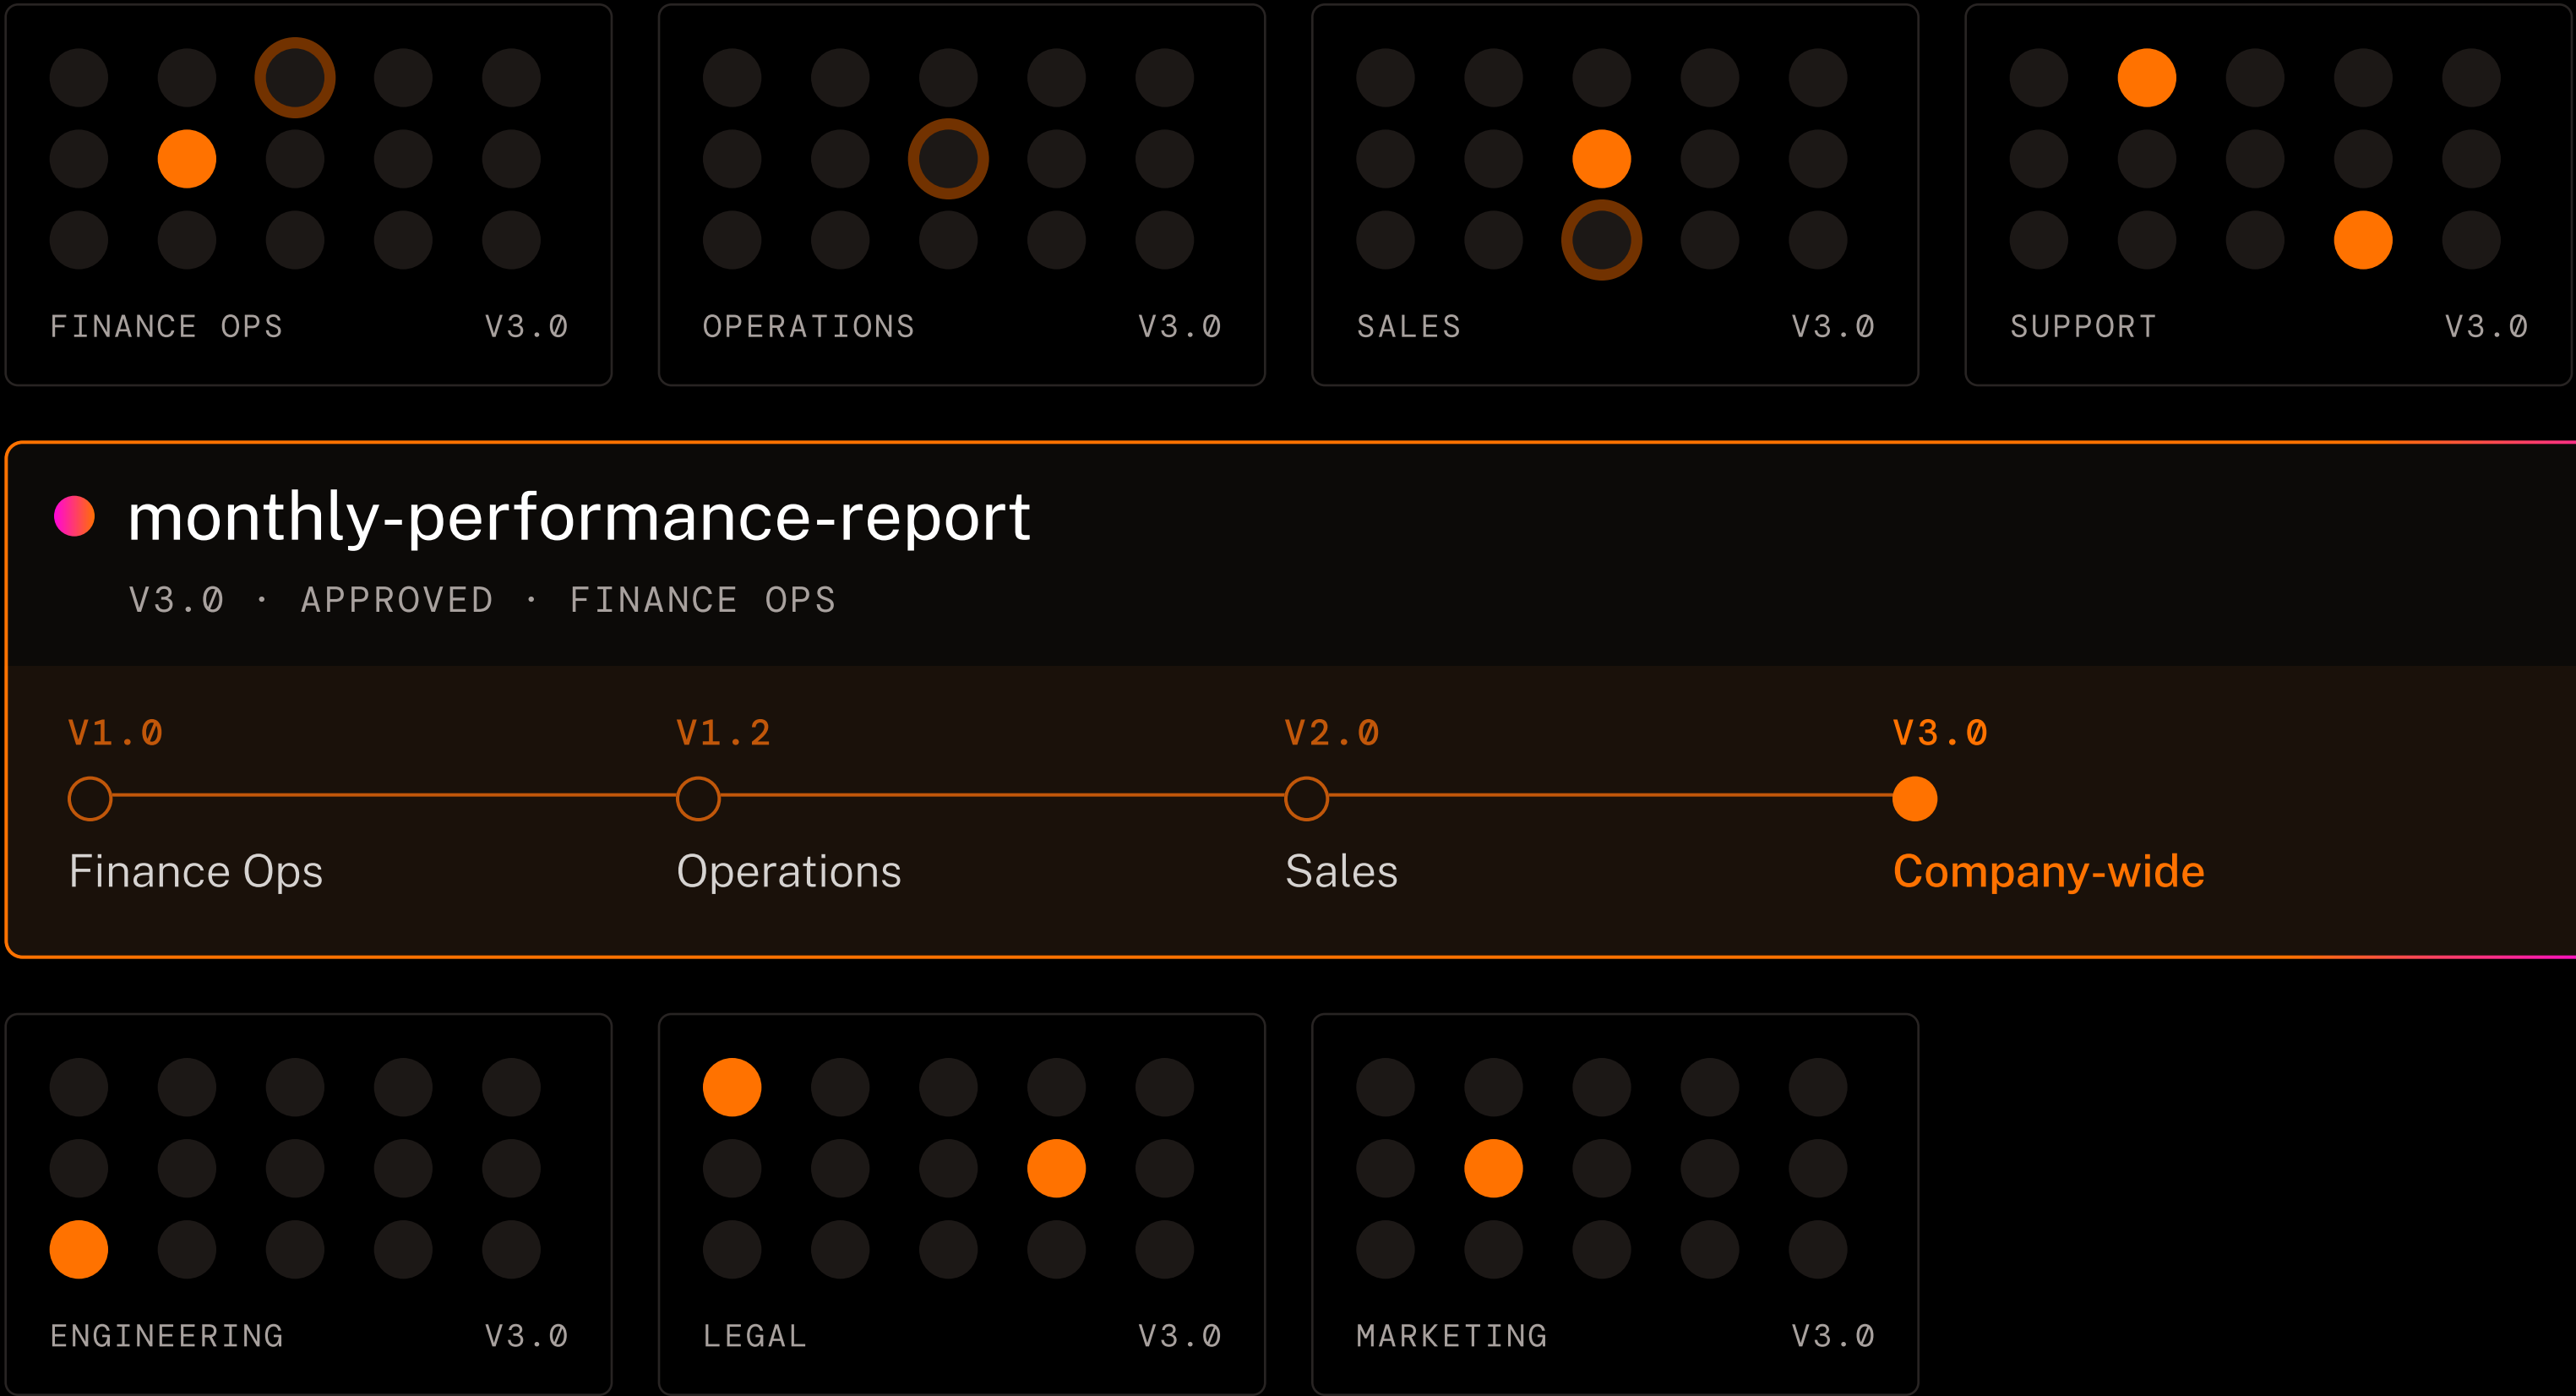

ASSESSMENT AGENT

• Assessment to you for review. Nothing approved without you

CLAUDE

Logged to Security and Risk • Run 588

Eliminate agent silos.

TEAMS USING IT NOW?

7

One team shares an agent. Each time another team improves it, the new version reaches everyone using it, and more teams pick it up.

Workflows that **run as designed**.

Your agents depend on each other. Cartesian packages them into one workflow, so you set the order and dependencies once, and they are enforced on every run.

● monthly-performance-report

V3.1 · APPROVED · FINANCE OPS

RUNS IN ORDER

1

Data agent

MONTHLY, 1ST, 9:00

2

Report agent

DEPENDS ON 1

3

QA agent

DEPENDS ON 2

Measure outcomes, not just usage.

Cartesian links every run to the task behind it, so you can see what each agent solves, what it costs, and where demand isn't being met.

COST PER OUTCOME

What each solved task costs, by team and by agent.

WORKFLOW GAPS

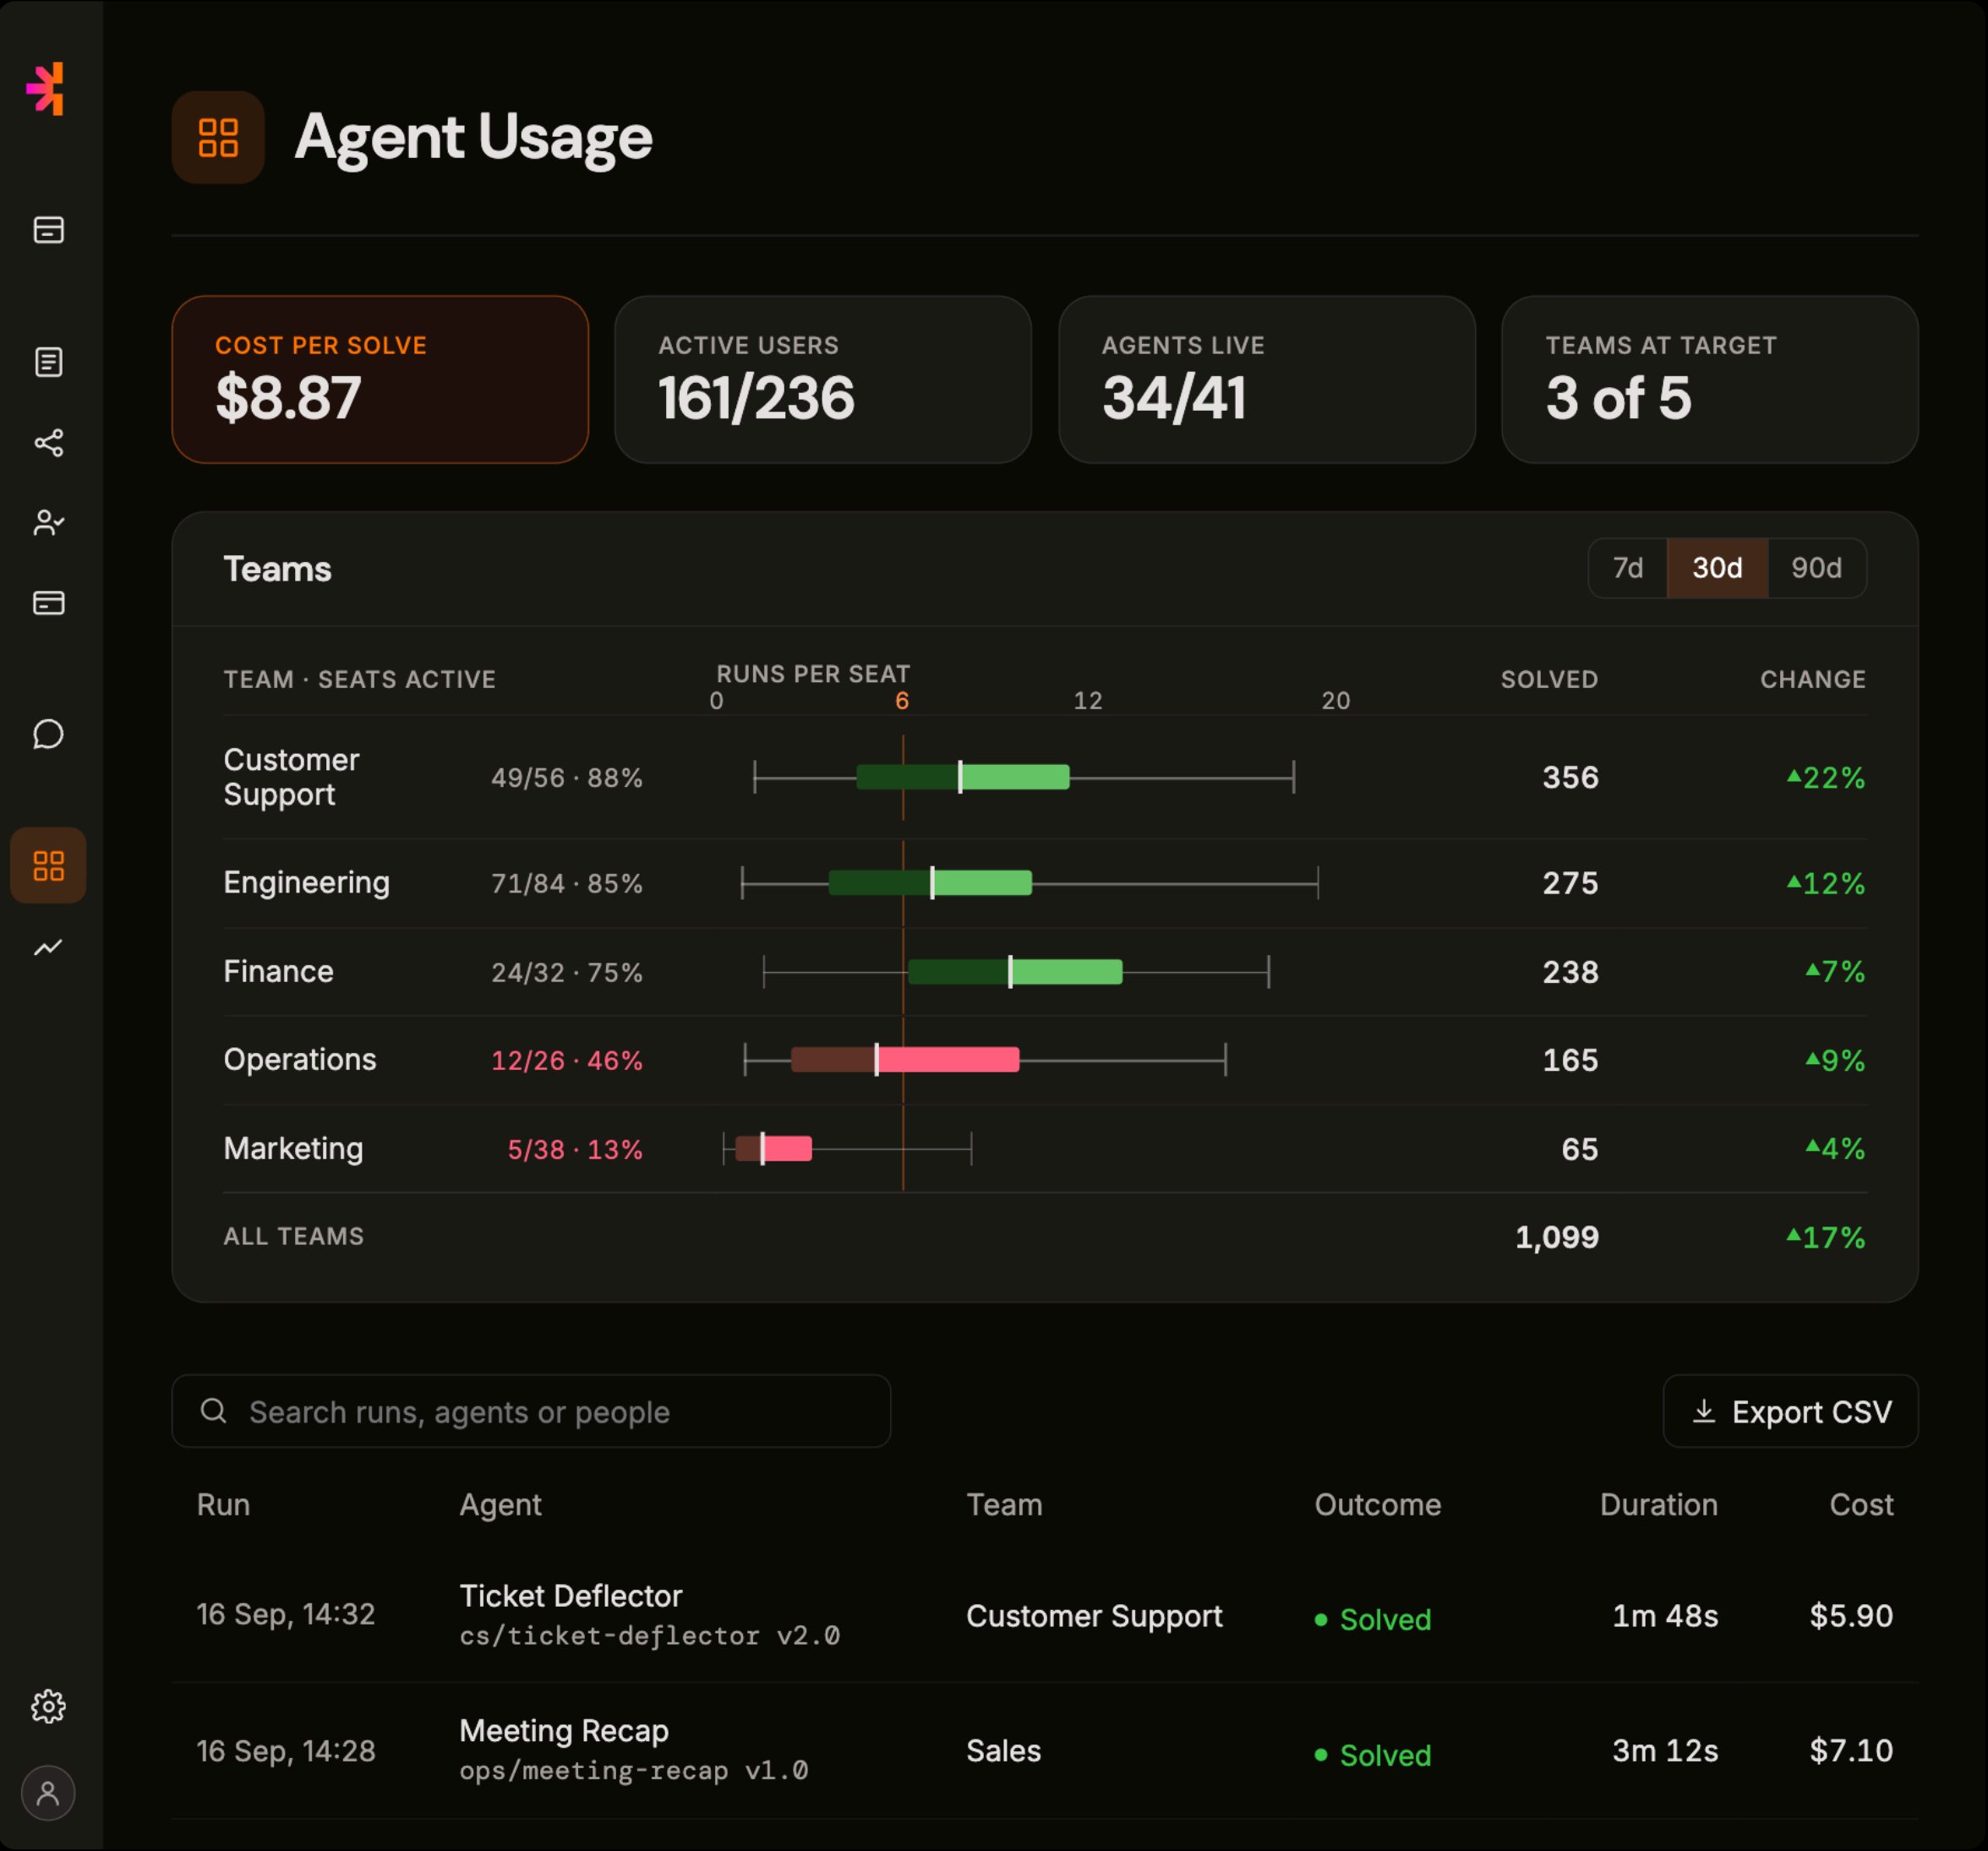

The tasks people ask for that no agent covers yet.

AGENT CHURN

The agents people stop using, and when.

TOTAL ROI

What your agents return against your baseline.

Fill any gaps with approved external agents.

Cartesian shows you the tasks your agents don't cover yet. Approve an external agent to fill the gap, and Cartesian surfaces it the same way as your own, inside the tools your teams already use.

WORKFLOW GAP

“Build a dashboard of this quarter’s pipeline by region.”

SALES · ASKED 38 TIMES THIS MONTH · NO AGENT

SURFACED FROM YOUR CATALOGUE

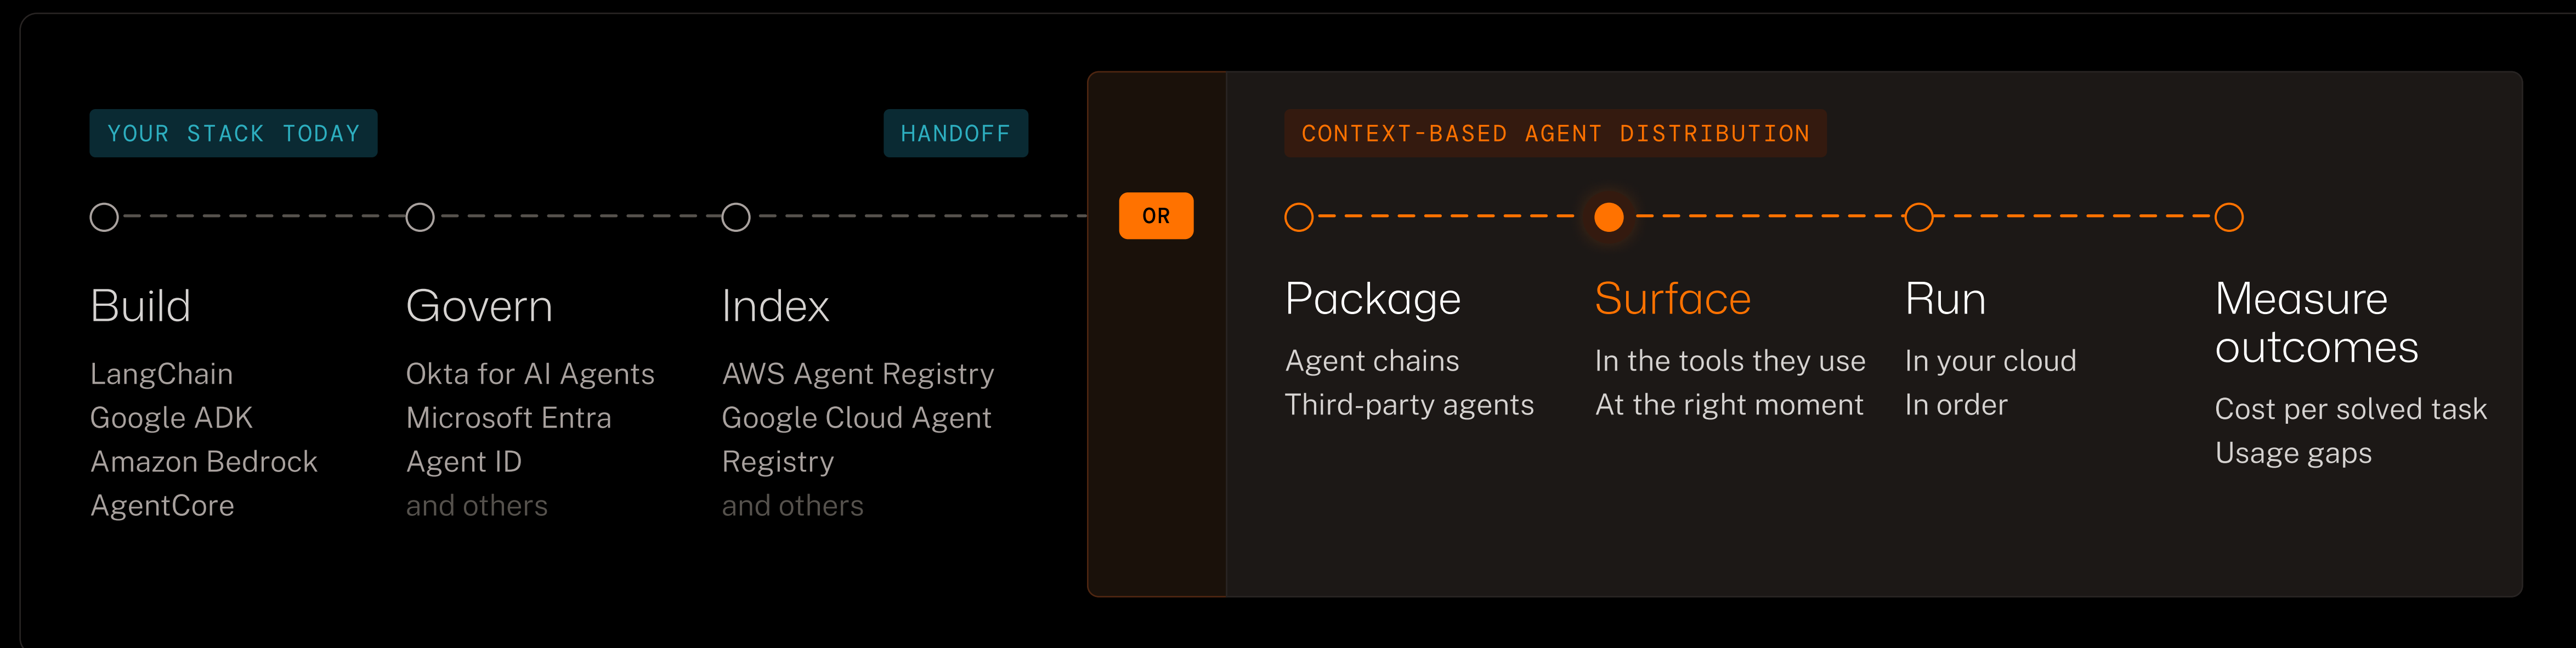

dashboard-generator

EXTERNAL

BUILT BY SYNOPTIX · APPROVED FOR SALES

Sales runs it from Claude, like any of its own agents.

Your stack gets agents built and approved.
Cartesian gets them to the people who need them.

Cartesian reads a registry. It does not replace one.

Security and control, **built in.**

PRIVATE

Runs inside your own cloud account, and reads the conversation there to make the match.

SECURE

Your identity provider and your policies apply to every run.

DATA

Your agent code, your prompts and your agent activity stay in your environment.

ACCESS

Your identity provider decides who can call what.

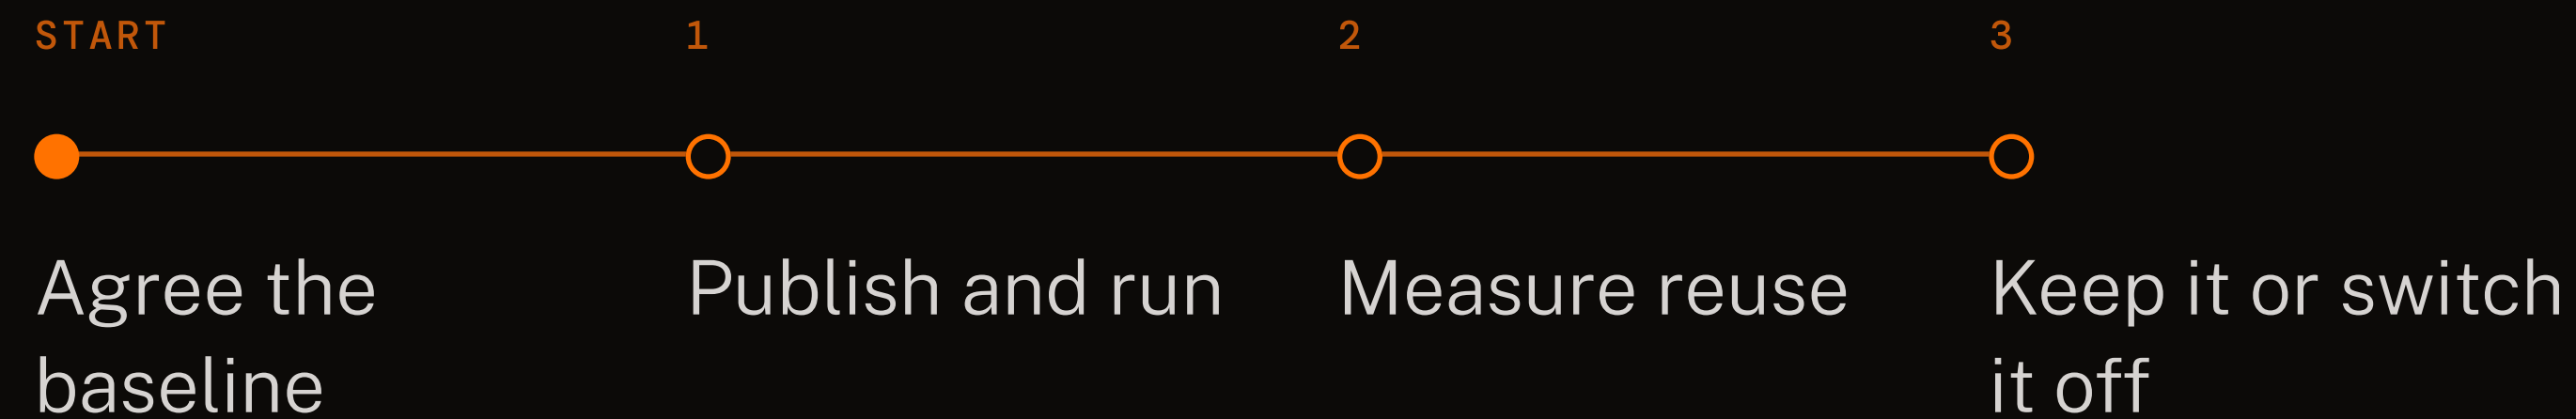

SOC 2

INDEPENDENTLY AUDITED

How you start, and how it's priced.

DESIGN PARTNERSHIP

Three milestones, one team, no fee.

SUBSCRIPTION

One subscription, agent runs included.

Once the partnership has proved the value, you move to a subscription that includes agent runs. Contact us for pricing.
